

Technical specifications

HSI Harness Complete

This is a 5-point full-body harness with adjustability. The shoulder straps can be adjusted using both manual buckle straps and automatic click buckles. Additionally, the harness features adjustable waist and thigh straps, both equipped with automatic click buckles for ease of use.

An advantage of this harness is its two tool straps, enabling the user to securely carry essential tools while working at height. For attachment points, the harness includes a D-ring at the back for secure anchoring and two D-rings on the sides for optimal work positioning, finally the harness also has two attachment loops providing versatile and secure connection options.

Use

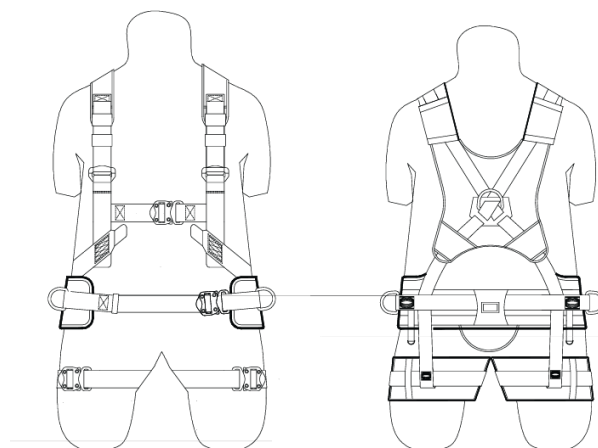

This fall protection harness is designed to distribute impact forces evenly across the body, it provides secure attachment points for fall arrest systems.
