

Technical specifications

Scope RBI Baseplate

The Scope RBI base plate is specially designed to adhere to the bituminous roof membrane through torching, without penetrations in the roofing, insulation, and structure. It is highly suitable for roofs where attachment to the structure or additional weight on the roof is not desired or allowed, such as in cold storage facilities, data centers, and concerns from building owners regarding waterproofing. The RBI base plate is used for the Scope Single Anchor (SAP), and its installation is simple, fast, and effective.

An instructional video is available via the following link <https://www.hutter.nl/hutter-safety-rbi-baseplate-introductie/>

Use

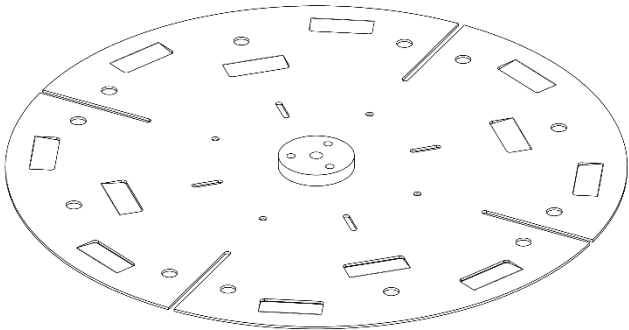

Excellent for fall protection applications where penetrating the roof membrane is not desired or possible, such as with weak roof structures. Suitable for use with the Scope anchor point and Scope cone by attaching them to the RBI base plate. The endpoints and corners must be anchored due to pre-tensioning. Installation instructions available upon request.

Materials

Baseplate:	Stainless steel 304 – 2 mm
Attachment disc.:	Stainless steel – 10 mm

Technical details

Weight:	2.9 kg
Dimensions:	Diameter 490 mm
Anchoring:	Adhesion and anchoring
Colour:	Special coatings available upon request
Packaging:	Individually packed or in multiple pieces.
Ref.:	VB97DI041
