

Technical specifications

Scope HD (Overhead) Intermediate

The Scope HD (Overhead) Intermediate is part of the horizontal line system and serves as a cable support placed at specific intervals. These intervals depend on the configuration, system length, number of users, and the cable tension (150kg to 500kg).

Use

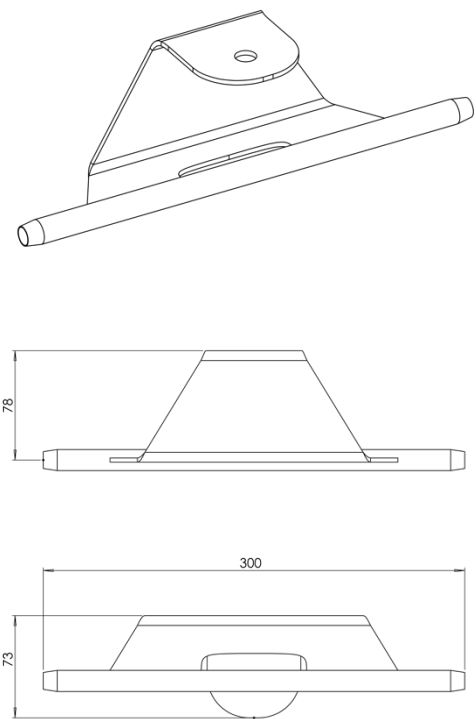

Exclusive to the Scope HD (Overhead) system. The Scope Intermediate is designed so that the HD (Overhead) Shuttle with line or fall arrest device can pass over it smoothly. When used at hip or shoulder height, ensure that the mounting position of the intermediate is sufficiently long for uninterrupted passage of the Shuttle.

Materials

Intermediate:	Stainless steel 316
Surface treatment:	Electropolished

Technical details

Weight:	0.6 kg
Attachment:	M12
Marking:	Serial number on chasing
Packaging:	Individual unit box
Colour:	Chrome
Ref:	VB04OH020
