

Technical specifications

Scope HD (Overhead) Absorber

The Scope HD (Overhead) absorber is part of the horizontal line system and is installed on one side of the line to absorb the energy of the fall and limit damage to users and the structure. This significantly reduces the force on the system.

Use

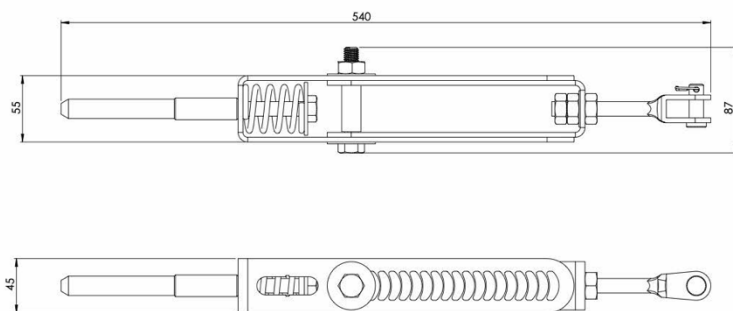

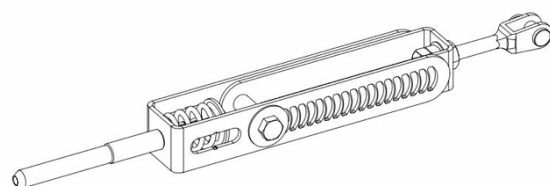

The Hütter HD (Overhead) system is a horizontal cable system with end and intermediate points attached to the structure or static poles. The system consists of a specially developed shuttle, end and intermediate points, and an absorber.

Materials

Shock absorber:	316 stainless steel
Surface treatment:	Electropolished

Technical details

Breaking force:	>40.0 kN
Weight:	1.89 kg
Attachment:	Fork and terminal
Activation:	From 600kg onward
Marked:	Batch number
Packaging:	Box of one unit
Colour:	Chrome
Ref:	VB04OH076
