

# HEAVY DUTY SYSTEM

## AS A PREFAB SOLUTION

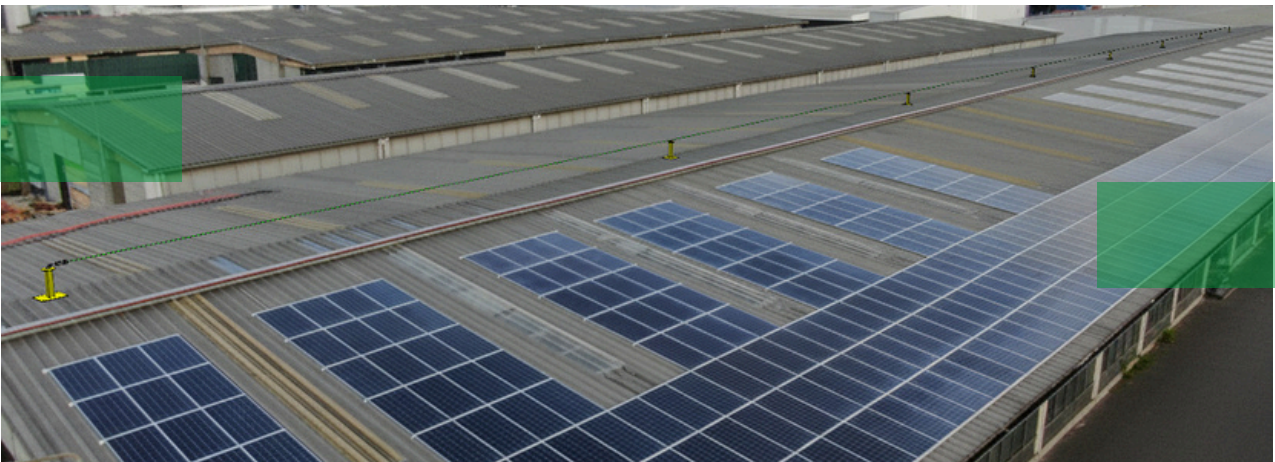

The Heavy Duty system proves its value not only for overhead or rooftop installations. With the new synthetic cable, this system is also ideally suited for prefabricated applications.

Our engineers have developed a prefab fall protection lifeline system for structures such as warehouses, cranes, and industrial facilities, where safe working at height is essential. The anchor posts for the lifeline system are pre-installed at the factory.

**SAFETY AT HEIGHT  
NUMBER II**

On-site at the customer's location, the system is then easily completed with the HSL-XX synthetic cable and innovative ratchets – all without the need for special tools. Safe, effective, and efficient. In addition, an online installation training is available to ensure correct and precise assembly at all times.

We warmly invite you to explore the technical, commercial, and safety advantages of this unique application. Definitely worth your attention!
